

Table of Contents

| Experiment no. | Experiment name | Remarks |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------|---------|
| 1. | Introduction to MATLAB programming | |
| 2. | Basic concept development on the idea of Simulink using MATLAB | |
| 3. | Generate an algorithm and write a program to calculate the Y-bus matrix of a given power system | |
| 4. | Generate an algorithm and write a program to calculate the Y-bus reduction matrix of a given power system | |
| 5. | Generate an algorithm and write a program on load flow study of a given power system using Gauss-Seidel method | |
| 6. | Generate an algorithm and write a program on load flow study of a given power system using Newton Raphson method | |
| 7. | Write a program to draw the zero, positive, and negative sequence components of a given unbalanced system | |
| 8. | Transient response analysis of a series RL circuit to imitate the terminal fault of an unloaded alternator | |
| 9. | Load flow study using MATLAB Simulink platform | |
| 10. | Study of the effect of over-current relay and observation of the response for 3LG and 1LG fault in transmission line using MATLAB Simulink | |
| 11. | Study of the effect of the circuit breaker and observation of the response for 3LG and 1LG fault in transmission line using MATLAB Simulink | |
